Dear Sir or Madam

## Modernising Business Communications

The Australian Banking Association (**ABA**) welcomes the opportunity to make a submission to the Treasury consultation on modernising business communications. The ABA advocates for a strong, competitive, and innovative banking industry that delivers excellent and equitable outcomes for customers. The ABA promotes and encourages policies that improve banking services for all Australians, through advocacy, research, policy expertise and thought leadership.

The ABA welcomes the Government's establishment of the Deregulation Taskforce (**Taskforce**). The proposed reforms to modernise business communications have the potential to reduce business costs and reflect the way Australian consumers and businesses prefer to manage their financial affairs today. The ABA particularly welcomes the Taskforce's whole-of-economy approach by working to improve technology neutrality across Commonwealth laws, and importantly - partnering with states and territories to explore opportunities to achieve national consistency.

During 2020, COVID-19 emergency e-transaction reforms undertaken by all levels of government ensured essential business transactions could occur during the pandemic and avoided interruptions for both consumers and businesses. The success of these reforms in supporting economic activity in a safe and modern way means these initiatives should now be made permanent nationally.

The ABA strongly supports the need for nationally consistent technology neutrality reforms. Without consistency and continued co-operation across all levels of governments material impediments to the full adoption of electronic execution in economically significant areas such as mortgages and the execution of deeds will remain.

The ABA have provided feedback on the following issues raised in the Treasury consultation paper:

- Written Communications with stakeholders.
- Communicating with regulators.
- Written signature requirements.
- Payment methods

Each of these are considered below.

### Written Communications with Stakeholders

The ABA supports Treasury's proposed principal to adopt technology neutral laws to remove regulatory barriers to electronic communications, such as removing exemptions to the *Electronic Transactions Regulations 2020* in respect of business communications. This will allow for entities to choose a default means of providing 'in writing' communications that is appropriate to their circumstances and will still allow recipients to receive information in other formats (such as paper) where digital formats are not practical.

The ABA agrees with Treasury that the current laws impose limitations on the way Australian businesses can communicate with their stakeholders by requiring hard copy communications as a default option. Australia is a nation of 'early adopters' of new technologies, Treasury's proposal will allow businesses to better meet customers' expectations for easily accessible and timely information.

## Communicating with regulators

The ABA supports Treasury's proposals to improve the technology neutrality for the provision of information to regulators. We encourage Treasury go further in its proposed principles and introduce a process by which Treasury portfolio agencies share a consistent and co-ordinated approach to data collection.

Banks provide significant volumes of data to Treasury as well as its portfolio agencies: the Australian Bureau of Statistics (**ABS**), Australian Prudential Regulation Authority (**APRA**), Australian Competition and Consumer Commission (**ACCC**), Australian Securities and Investments Commission (**ASIC**) and the Australian Transaction Reports and Analysis Centre (**AUSTRAC**). While these agencies should have the ability to specify what information they require, greater efficiencies could be gained from having a central point of data collection or quality control in a manner similar to which APRA coordinate Economic and Financial Statistics (**EFS**) shared on behalf of the RBA and the ABS.

Any data provision by banks requires significant investment of time and resources in their own reporting systems. When Treasury agencies unilaterally develop their own data collections, it can lead to a multitude of data definitions that require banks to create manual overrides of their systems to extract the data. Often these requests are developed by government specialists with legal and/or policy backgrounds without experience in data.

A centralised point through which all government data requests must flow will allow for oversight of data collections by appropriately qualified data specialists. They can ensure that the request is not a duplicate of a pre-existing request and provide advice as to developing the collection itself. A coordinated approach will reduce regulatory costs and duplication across the finance industry.

## Written signature requirements

The ABA strongly supports the Treasury proposal to explicitly enable the use of electronic signatures as governments build on the successful reforms put in place in response to COVID-19. The ABA agrees that electronic signature technology can replace the need for 'wet ink' signature and witnessing requirements. Technology can provide an equivalent and often a reliable indication of the signatory's identity and intention – and importantly, these reforms do not displace consumer protections such as the Banking Code requirements for guarantees and joint loans.

The ABA supports the current reforms by both State and Federal Government to facilitate the continuation of e-transactions post COVID-19 (see list of reforms in Attachment B & C) and the ABA is actively providing feedback on the behalf of industry. However, to achieve the maximum economic fully benefit reforms need to be implemented consistently across both Federal and State Governments. Given this, the ABA appreciates the Government's leadership to ensure a coordinated implementation of reforms for the benefit of all Australians.

The ABA supported the Government's prompt action during the COVID-19 pandemic granting temporary relief (until 31 March 2021) for the signing and sending of electronic documents. We welcome the Government's intention to now make these technology-neutral reforms permanent, via the proposed *Treasury Laws Amendment (2021 Measures No 1) Bill 2021*. This bill is currently referred to the Senate Economics Legislation Committee and not due to be reported on until 30 June 2021. Without an extension of the existing temporary relief, Australian businesses will face unnecessary cost in reverting to the old paper-based processes temporarily. The ABA would welcome an extension of the temporary relief until a time after the Senate Economics Legislation Committee reports.

## Payments

The ABA supports a technology neutral approach to payments. The ABA welcomes the Treasury's proposal to increase payment neutrality within its own legislative portfolio. The ABA would also support a program of payment-technology neutrality reforms to help smooth the transition to electronic transactions, which will benefit the economy.

AusPayNet have identified a 25 pieces of legislation regulations (Commonwealth, State, and Territory Acts) requiring changes to make them payment-type neutral (Attachment C). The ABA considers that a program of payment neutrality reforms encompassing the identified pieces of legislation should be prioritised by Treasury. These reforms align with the Government's ambition to be a leading digital economy by 2030 as new and secure payment methods reduce costs for small business and reflect consumers clear preference for alternative, more secure and faster payment methods.

## Legacy payments infrastructure

The RBA 2019 Consumer Payments Survey<sup>1</sup> provides evidence that Australian consumers increasingly use electronic payment methods. The survey showed that Australians are continuing to switch to electronic payment methods in preference to cash and confirmed that personal cheques are very rarely used for consumer payments.

These trends are seen across all age groups, cementing Australia as a nation of 'early adopters' of new technologies. The RBA survey shows the use of cheques is still heavily concentrated among older Australians. All personal cheque payments recorded in the 2019 survey were by respondents aged over 50, with 80 per cent of them made by people aged over 65. Even so, for consumers aged over 65, personal cheques represented less than 1 per cent of their number of weekly payments, down from about 2 per cent in 2007.

There is a significant opportunity cost for Australia in maintaining legacy payment and financial market infrastructure. These investments in legacy systems would be better spent on enhancing and developing additional functionality that utilises new payments infrastructure such as the New Payments Platform (**NPP**). The launch of this NPP in early 2018 allows consumers and businesses to make secure real-time, 24/7 payments with richer data (which also reduces accounting and administration costs for small business). The rate of take-up of fast retail payments in Australia is quicker than that in most other countries that have also introduced fast payments<sup>2</sup>.

Moving to electronic payments delivers important benefits to customers and business.

- New payments infrastructure brings direct benefits. For example, during the recent bushfires, the Australian Government was able, via the RBA, to use the NPP to make *immediate* payments to people at a time when they were most in need.
- For businesses, faster payment methods will help to realise the economic benefits of the Government's Digital Economy reform agenda<sup>3</sup> (such as e-invoicing, single touch payroll) by assisting with cash-flow management which is the lifeblood of any Australian small business.

The ABA proposes that the Government, in partnership with industry facilitate the careful phasing out of redundant legacy payment systems. The retirement of legacy technologies is critical for supporting a modern financial and payments eco system and meet the Government's ambition to be a leading digital

<sup>1</sup> The Reserve Bank of Australia (RBA), 2020, Research Discussion Paper RDP 2020-06: Consumer Payment Behaviour in Australia: Evidence from the 2019 Payments Survey retrieved February 2021 <https://www.rba.gov.au/publications/rdp/2020/2020-06.html>

<sup>2</sup> RBA, 10 December 2019, Speech by Philip Lowe, Governor "A Payments System for the Digital Economy" retrieved February 2021 <https://www.rba.gov.au/speeches/2019/sp-gov-2019-12-10.html>

economy by 2030. The ABA notes the work of AusPayNet in their Future State of Payments Plan, which provides an excellent starting point for the phase out of legacy payment systems<sup>3</sup>.

---

Retiring redundant payments infrastructure is good for the economy (Attachment A). The most recent source of information on the cost of cheques is the RBA 2014 Payment Cost Study which examined the costs borne by merchants, financial institutions, and individuals in the use of different payment methods. Using a set of simple assumptions, if the RBA's costs were applied to the number of cheques used in 2020, the ABA estimates that phasing out cheques reduces costs to the economy of up to \$250 million a year and those savings sit alongside other economic benefits. That said, since 2014 there have been technology advances that have likely to have lowered those cheque processing costs estimated by the RBA. However, cheque payments are an inherently physical payment therefore are likely to still be the highest-cost and slowest payment type for business and customers. An updated RBA Payment Cost Study could properly estimate the potential cost savings and benefits to the economy from the phasing out of legacy payment infrastructure.

A plan will provide a path to ensure that all businesses, customers, and governments have time to adopt one of the many alternative payment types already available (e.g. BPAY, EFTPOS, Osko). It will also provide a 'nudge' to those still using cheques to make the required changes and enable the payments industry to assist those remaining customers who prefer or rely on cheques.

Yours sincerely

Karen O'Brien  
Policy Director

## Attachment A The case to support the customer led transition to phase out cheques

The RBA believes it is important that the decline, and eventual closure, of legacy payment systems, such as cheques, occurs in a planned rather than disorderly manner<sup>4</sup>. Customers have been using cheques less and less over the years with an on average 20 per cent decline per year (see RBA Graph below).

Given this, the RBA consider that “it will be appropriate for the industry to wind up the cheque system, given the high cost of maintaining it and the increased availability of payment methods that can meet similar payment needs”.<sup>5</sup>

The ABA considers that the transition to digital payments has significant benefits to the economy and small business.

- The per-cost transaction cost of supporting cheque payments, which is already high relative to other payment methods, will continue to rise. SME’s face higher costs processing cheques given they do not have scale benefits. (according to the RBA 2020 and 2014 Payment Cost Reviews.),
- Reduces accounting administration costs through better data matching with e-invoices. Electronic payments provide more remittance data that can be matched automatically with invoices avoiding manual reconciliation.
- Much higher risk of non-payment for services/goods as cheque payment is not instantaneous and funds can be unavailable when presented for payment (i.e cheque ‘bounces’).
- Cheque funds do not clear immediately (requires five business days), and a cheque payment can be cancelled or revoked even after presentation.

---

### Why now?

---

<sup>4</sup> RBA January 2021, Submission to the Payments System Review retrieved from [https://treasury.gov.au/sites/default/files/2021-02/147719\\_rba.pdf](https://treasury.gov.au/sites/default/files/2021-02/147719_rba.pdf)

<sup>5</sup> RBA January 2021, Submission to the Payments System Review retrieved from [https://treasury.gov.au/sites/default/files/202102/147719\\_rba.pdf](https://treasury.gov.au/sites/default/files/202102/147719_rba.pdf)

- If consumer demand continues at the same rate, cheque use will approach zero within the next five years.<sup>6</sup> AusPayNet expects that a decision on the operational future of Australian Paper Clearance System (APCS) will need to be made within two years.
  - COVID-19 accelerated the take-up of electronic payments (such as ‘tap and go’ and card payments) payments given social-distancing requirements. The RBA considers that “the changes in spending patterns induced by the emergence of COVID-19 in Australia – including a further shift away from cash and increased online shopping – are likely to reinforce the trend to electronic payments”.
    - ✦ Banks ensured all account holders had access to a debit card given branch access was limited during COVID-19 lockdowns.
    - ✦ Australian governments implemented several measures to facilitate electronic transactions for large purchases such as housing during COVID-19 which are likely to be made permanent.
    - ✦ New payments platform (**NPP**) in place since 2018 allowing instant payments without disclosing bank details.
- Post-COVID 19 economic recovery needs to support small business to increase productivity and reduce costs, so it can better contribute to economic growth. Phasing out of cheques can help the productivity and efficiency of small business.

## Why should Government get involved?

- There are significant economic benefits from modernising the payment system<sup>8</sup>.
  - An efficient payment system is essential infrastructure for economic growth. The ABA supports the Government’s view that digital systems are core to our everyday lives. Like all infrastructure investment, Government facilitation/coordination is necessary to ensure these economic benefits are fully captured.
- The phasing out of cheques is consistent with the Government’s strategy for a Digital Economy.
  - The Digital Technology Taskforce was established by the Prime Minister in November 2019. The Taskforce, hosted in the Department of the Prime Minister and Cabinet, is looking to ensure Australia is a leading digital economy by 2030.
    - ✦ Digital economy and technology Ministers agreed that great support for businesses to digitise was in place, but that more can be done. Helping businesses to fully move to digital payments will save money immediately and increase the data available for better business decisions.<sup>7</sup> Existing Government programs to assist SMEs to become more digitised (such as JobMaker Digital Business Plan 2020) could be used to support small business transition to electronic payments.
- Australia needs a planned phase out of cheques if it wants to be a leading digital economy by 2030. Australia is comparatively behind several other countries (such as New Zealand) when it comes to the phasing out of old cheque payment technology.

## Background

### The declining use of cheques

The RBA 2019 Consumer Payment Survey confirmed that personal cheques are seldom used to make payments and states that the cheque payment should be retired. Australian consumers increasingly preferring to make their payments electronically and by card. The RBA survey provided further evidence of the long-term decline in the cheque system, with personal cheques accounting for only 0.2 per cent of the number of payments made during the week of the survey<sup>8</sup>.

Cheque use has plunged by more than 20% each year since 2016. The COVID pandemic seems to be accelerating this decline, with the RBA reporting a 15% decline in April 2020 alone. If current trends were to continue, there would be no cheques in circulation within five years. Australia is therefore now at the point where the public conversation can focus on the inevitability of the end of the cheques system.

Australia is not unique. The decline in cheque use is a global trend, but the rate at which this is happening varies from country to country. Between 2011 and 2015, Australia's drop in cheque use (45.6%) exceeded that of most other similar countries including Canada (-25.6%), France (-24.6%) and the United Kingdom (-42.5%)<sup>9</sup>.

### The economic cost of cheques to Australia

Improvements in the efficiency of payment systems is recognised to be associated with greater growth in GDP and economic activity. The migration to efficient retail payment instruments stimulates the overall economy and trade, ultimately benefiting consumers with lower prices and better services. Moreover, retail payment transaction technology has proven to be positively associated with real economic aggregates. Therefore, the presence and diffusion of new payment technologies such as mobile and online payments may have a positive impact on economic growth and trade in a similar way as ATMs and point-of-sale (POS) terminals did when these became the main technologies for accessing funds and carrying out transactions, respectively.<sup>10</sup>

The phase out of cheques increases productivity and economic efficiencies for business in three ways<sup>11</sup>:

- Allows current investment in cheque systems and processes (largely a fixed cost) to be reinvested in digital technology to meet consumers current needs. Better digital payments technology is needed to capture the full efficiency benefits for business.
- Increases cashflow to business. Immediate payments can be made using the New Payment Platform and notification made to the receiver with funds immediately available in real time. In comparison, cheques can be used in payment, but funds are uncertain until the cheque is cleared.
- Reduces administration costs for both individual and business. Using and receiving cheques require significant administration time compared to other payment methods.
  - Cheques need to be deposited in a bank requiring a branch visit and statement reconciliation to ensure the funds have been received.

<sup>10</sup> European Central Bank (ECB), August 2019, Occasional Paper Series: Are instant payments becoming the new normal? A comparative study, No 229 retrieved in February 2021 <https://www.ecb.europa.eu/pub/pdf/scpops/ecb.op229~4c5ec8f02a.en.pdf>

<sup>11</sup> Deloitte 2015, B2B Payments, 2015 Australian and New Zealand Research, retrieved in February 2021 <https://www.b2bpay.com.au/wpcontent/uploads/2017/05/B2B-Payments-Report-August-2015.pdf>

- Payment information provided with cheques does not enable the full automation of accounting systems and e-invoicing, thereby increasing costs to business.

Cheques as a form of payment were found (by the RBA in 2014) to be six times more costly to process per transaction than card payments. The most recent source of information on the cost of cheques is the Reserve Bank's 2014 Payment Cost Study which examined the costs borne by merchants, financial institutions, and individuals in the use of different payment methods<sup>12</sup>. If the total number of cheque payments for the 2020 calendar year (as published by the RBA<sup>13</sup>) were multiplied by the cost of cheques calculated by the RBA in 2014, the cost of cheque payments would be in excess of \$237 million (equivalent to over \$259 million in 2020). The potential savings, based on the RBA 2014 costings, if the cheapest method was used (direct debit), would be \$220 million, which is equivalent to over \$241 million in 2020.

Since 2014, there have been several advances in payment technology that are likely to have lowered payment costs. However, cheque payments are an inherently physical payment which limits the potential savings. Given this, it is likely to still be the costliest payment type. An updated RBA Payment Cost Study is needed to estimate properly the potential benefits to the economy from the phasing out of cheques.

The phasing out of cheque payments can help level the playing field in terms of administration costs for small business when competing with larger businesses. The RBA's 2014 research results indicate that costs to business (merchants) varies significantly across payment types. It notes that "SMEs face higher private costs from cheque payments given they do not benefit from the economies of scale that can be achieved by large merchants".

## Increasing competition with non-bank payment providers

Cheques are a relatively costly payment instrument for financial institutions and many end users. Moreover, even though cheque use is likely to decline further, many of the overheads associated with the cheque system may remain largely unchanged, implying that average unit costs are likely to increase over time.<sup>16</sup> There is an expectation that traditional banks will accept cheques and the Cheques Act is unclear on the extent of onus for a financial institution to accept a cheque.

This disparity of expectations between traditional and neo-banks regarding maintaining cheque payments disadvantages banks when competing with non-bank payment providers<sup>14</sup>. Payments remain a substantial factor in banks' operating cost base, sometimes representing as much as 30 to 40 percent, partly because of the high technology spend associated with providing payments services. A disproportionate share of effort and resources is required to maintain and improve infrastructure, manage upgrades, implement rule changes, and rationalise legacy technology. This reduces the available investment resources for financial digital innovation.

## Overview of International plans to phase out cheques

The Australian Government is aiming to make Australia a leading digital economy and society by 2030 through its technology strategy.<sup>15</sup> However, Australia is comparatively behind a number of other countries when it comes to the phasing out of cheque payments.

Other jurisdictions have recognised the economic benefits of modernising their payment systems by reducing and/or removing the use of cheques. Examples include the following.

- Major New Zealand banks and the state revenue service no longer accept or issue cheques as a method of payment from the end of 2021<sup>16</sup>.
- UK began planning for the elimination of cheques in 2009 in response to declining cheque usage. Pay.uk is now implementing new payments architecture by 2030 which does not include cheques<sup>17</sup>.
- Denmark turned off interbank cheque clearing in 2017 in response to the declining use of cheques.<sup>18</sup>
- Malaysia's Financial Sector Blueprint e-payment roadmap sets targets to reduce cheque usage by half between 2005 and 2020. Imposes increasing payment fees to users to better reflect the cost of cheques<sup>19</sup>.
- The Monetary Authority of Singapore aims to be cheque free by 2025.<sup>20</sup>
- Reserve Bank of India (RBI) has attempted to reduce the usage of cheques and facilitate increased usage of electronic payments.<sup>21</sup>
- A number of South African Banks and the national revenue service aim to no longer issue and receive cheques from 1 January 2021<sup>25</sup>.

	enables pre-contractual	<p>We are seeking amendments to the National Consumer Credit Protection regime, to permit disclosure digitally without consent, provided the customer is given 7 days to opt out of this method, and the providing entity notifies the client that the disclosure is available and how to access it.</p>		<p>requirements set out in the NCCP Regulations are met.</p> <p>Commonwealth <i>The Electronic Transactions Regulations 2000</i></p>
				were replaced with updated <i>Electronic</i>

# Australian Banking Association

*Regulations 2020.* This update removed the broad requirement that documents and notices under the Credit Act could only be sent electronically only after detailed pre-consent

Commonwealth Electronic provision of financial services disclosure under the Corporations Act 2001.

Relief was granted under [ASIC Corporations \(Facilitating Electronic Delivery of Financial Services Disclosure\) Instrument 2015/647](#) to facilitate the delivery of disclosures electronically.

Further reform to allow for differences in treatment of electronic notifications and hard copy notifications. For example, if document emailed, currently an entity must have

disclosures had been give and the customer had consented in writing.

Obligations still exist under the NCCP Regulations to provide pre-consent disclosures to a consumer and obtain consent before providing documents electronically.

certainty an email address was provided for the purpose of receiving such notifications. If using 'publish and notify' methods (e.g. an email with a link to content) an ongoing ability to opt out must be provided to the customer prior to the notification being sent. This required entities to must identify customers and store their preferences.
